verso

BRAND & UI GUIDELINES · V1.0 · NOVEMBER 2026

Long videos in. Reels out.

How Verso looks, sounds and behaves. Use this guide for the app, the website, social posts and anything else that carries the name.

A product of Agape Labs, a brand of Exaltes Global Private Limited

01 · BRAND ESSENCE

Who Verso is

Verso is a desktop video editor for reels creators and YouTubers. It finds the best moments in long videos, turns them vertical and finishes them in one click, so anyone can post like a studio, even with no editing experience.

Promise

Go from a long video to ready-to-post reels in minutes, not hours.

Audience

Reels creators first, YouTubers second. India-first, global-ready. Many have never opened a timeline.

The name

"Verso" is the other side of the page. Every video has another side: the reel hiding inside it.

Confident

Premium, never flashy.

Effortless

Hide complexity. Lead with results.

Warm

Like a skilled friend helping you.

Fast

Every screen moves you forward.

02 · LOGO

The orbit mark

A comet-like orbit wraps a play button. It reads as motion and turning (horizontal becoming vertical) and as a video that keeps going. The orbit thickens as it travels, so it never looks like a generic "replay" icon.

Primary · on dark (preferred)

Primary · on light

One colour · on Ember

Mark · app icon · mono white

Clear space

Keep empty space around the logo equal to the height of the play triangle (about 25% of the mark height) on every side.

Minimum size

Full logo: 96px wide on screen, 25mm in print. Mark alone: 16px on screen. Below 32px use the small app icon file, which has a heavier orbit.

Don't

× Stretch or squash

× Recolour the orbit

× Place on busy backgrounds

× Rotate the logo

× Add shadows or effects

× Retype the wordmark

03 · COLOUR

Ember on ink

Verso is dark-first. Ember is used sparingly for the single most important action, the playhead and the logo. If everything is orange, nothing is.

Brand

Ember	Glow	Ink	Paper
#FF4A2B	#FF9466	#0B0B0F	#F5F4F0

Brand gradient: Glow to Ember at 135°. Use it only for primary buttons, the logo and hero headlines.

Neutrals (UI)

950	900	850	800	700	600
#0B0B0F	#111116	#16161C	#1D1D24	#2A2A33	#3A3A45

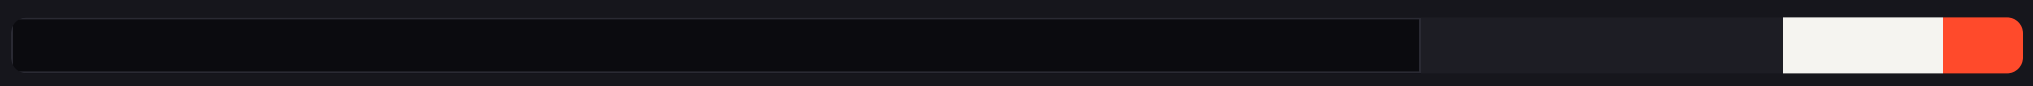

500	400	300	200	100
#5C5B66	#8E8C96	#B9B7BF	#DAD8DD	#F5F4F0

Semantic & timeline tracks

Success	Warning	Danger	Info	Video	Audio
#34D399	#FBBF24	#F87171	#60A5FA	#5B8CFF	#2FD4A3

Text	Effects	Captions
#FFB547	#C084FC	#F472B6

Proportion

About 70% ink, 18% surfaces, 8% text and 4% ember. All text pairs in this guide meet WCAG AA (4.5:1). Never put white text on Ember; use Ink.

04 · TYPOGRAPHY

Manrope, everywhere

One family keeps Verso calm and consistent. Headlines are ExtraBold with tight tracking; interface text is Medium and SemiBold. Fallback: Segoe UI Variable on Windows, SF Pro on Mac.

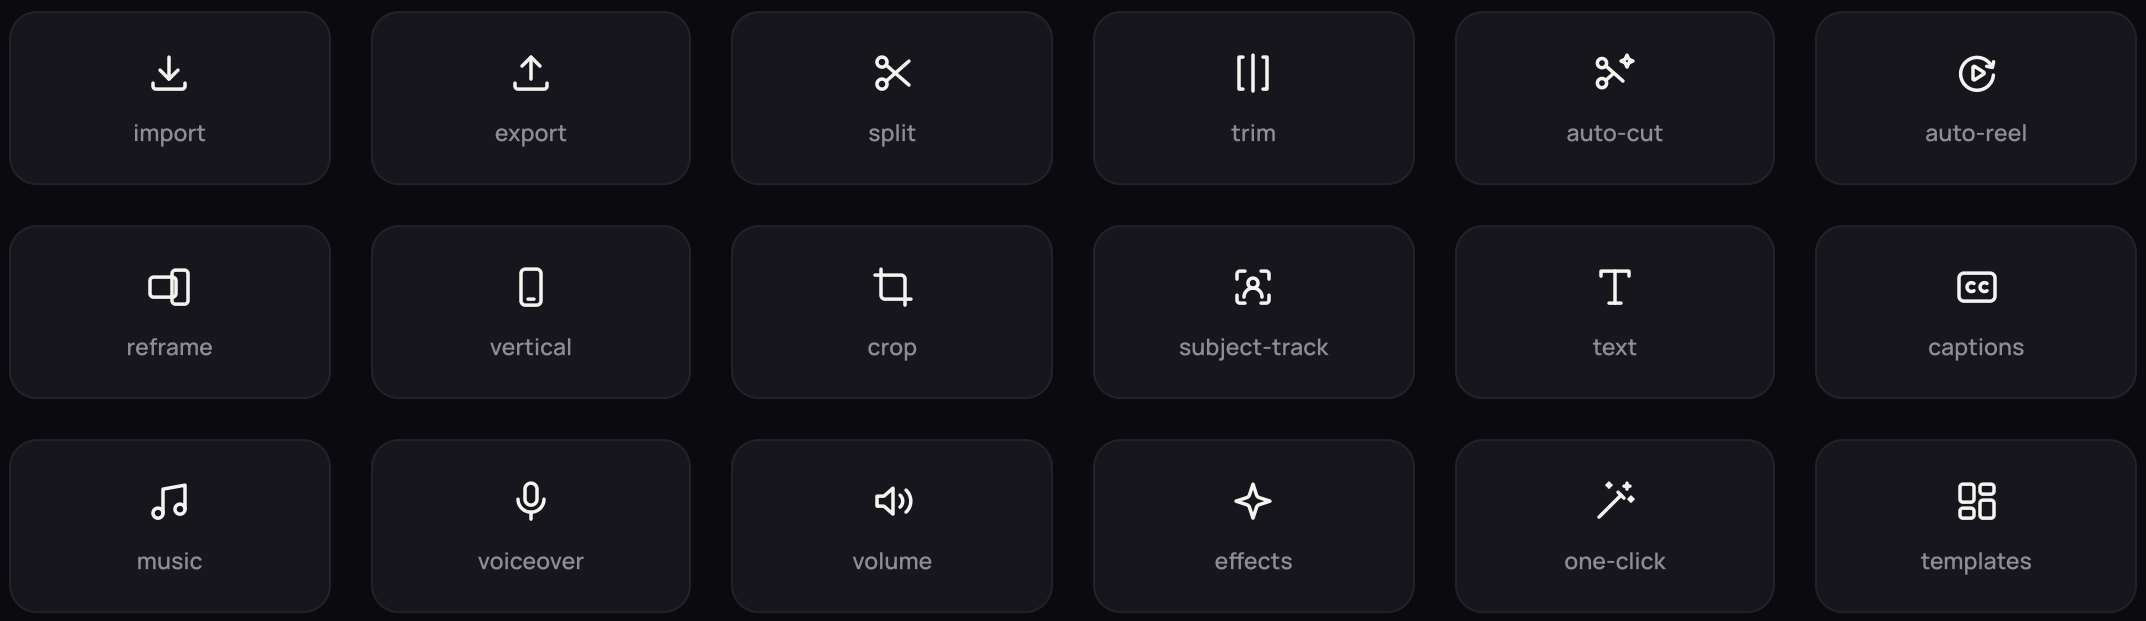

Aa

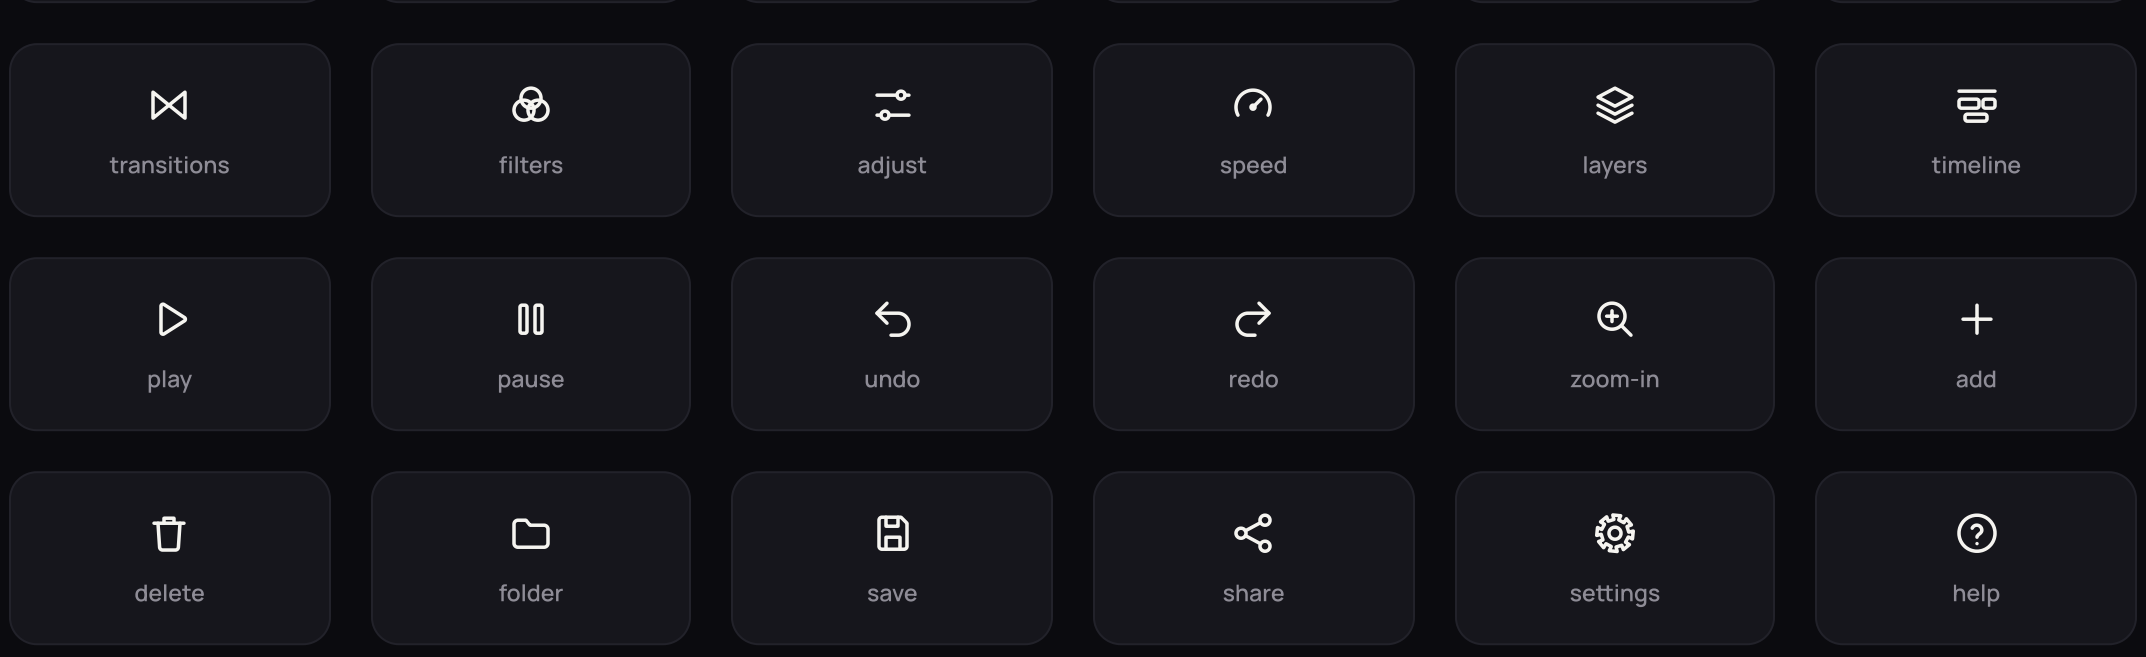

Hero	**Reels out.**	64px / 800
Display	**Make it vertical**	40px / 800
Headline	**Auto-cut your episode**	28px / 700
Title	**Caption style**	22px / 700
Body large	We found 4 moments that work as reels.	16px / 500
Body	Follow the speaker	14px / 500
Small	Hook score · 0:28	13px / 600
Caption	EXPORT · 1080P	12px / 600

05 · ICONOGRAPHY

36 icons, one hand

24px grid, 1.75px stroke, round caps and joins, 2px padding. Icons are outline by default and take the colour of their text. Fill an icon only for the active tool.

Sizes

16px in the timeline, 20px in toolbars and menus, 24px in the left tool rail.

Colour

Inactive: neutral 400. Active and hover: Paper. Selected tool: Ember icon on a raised surface.

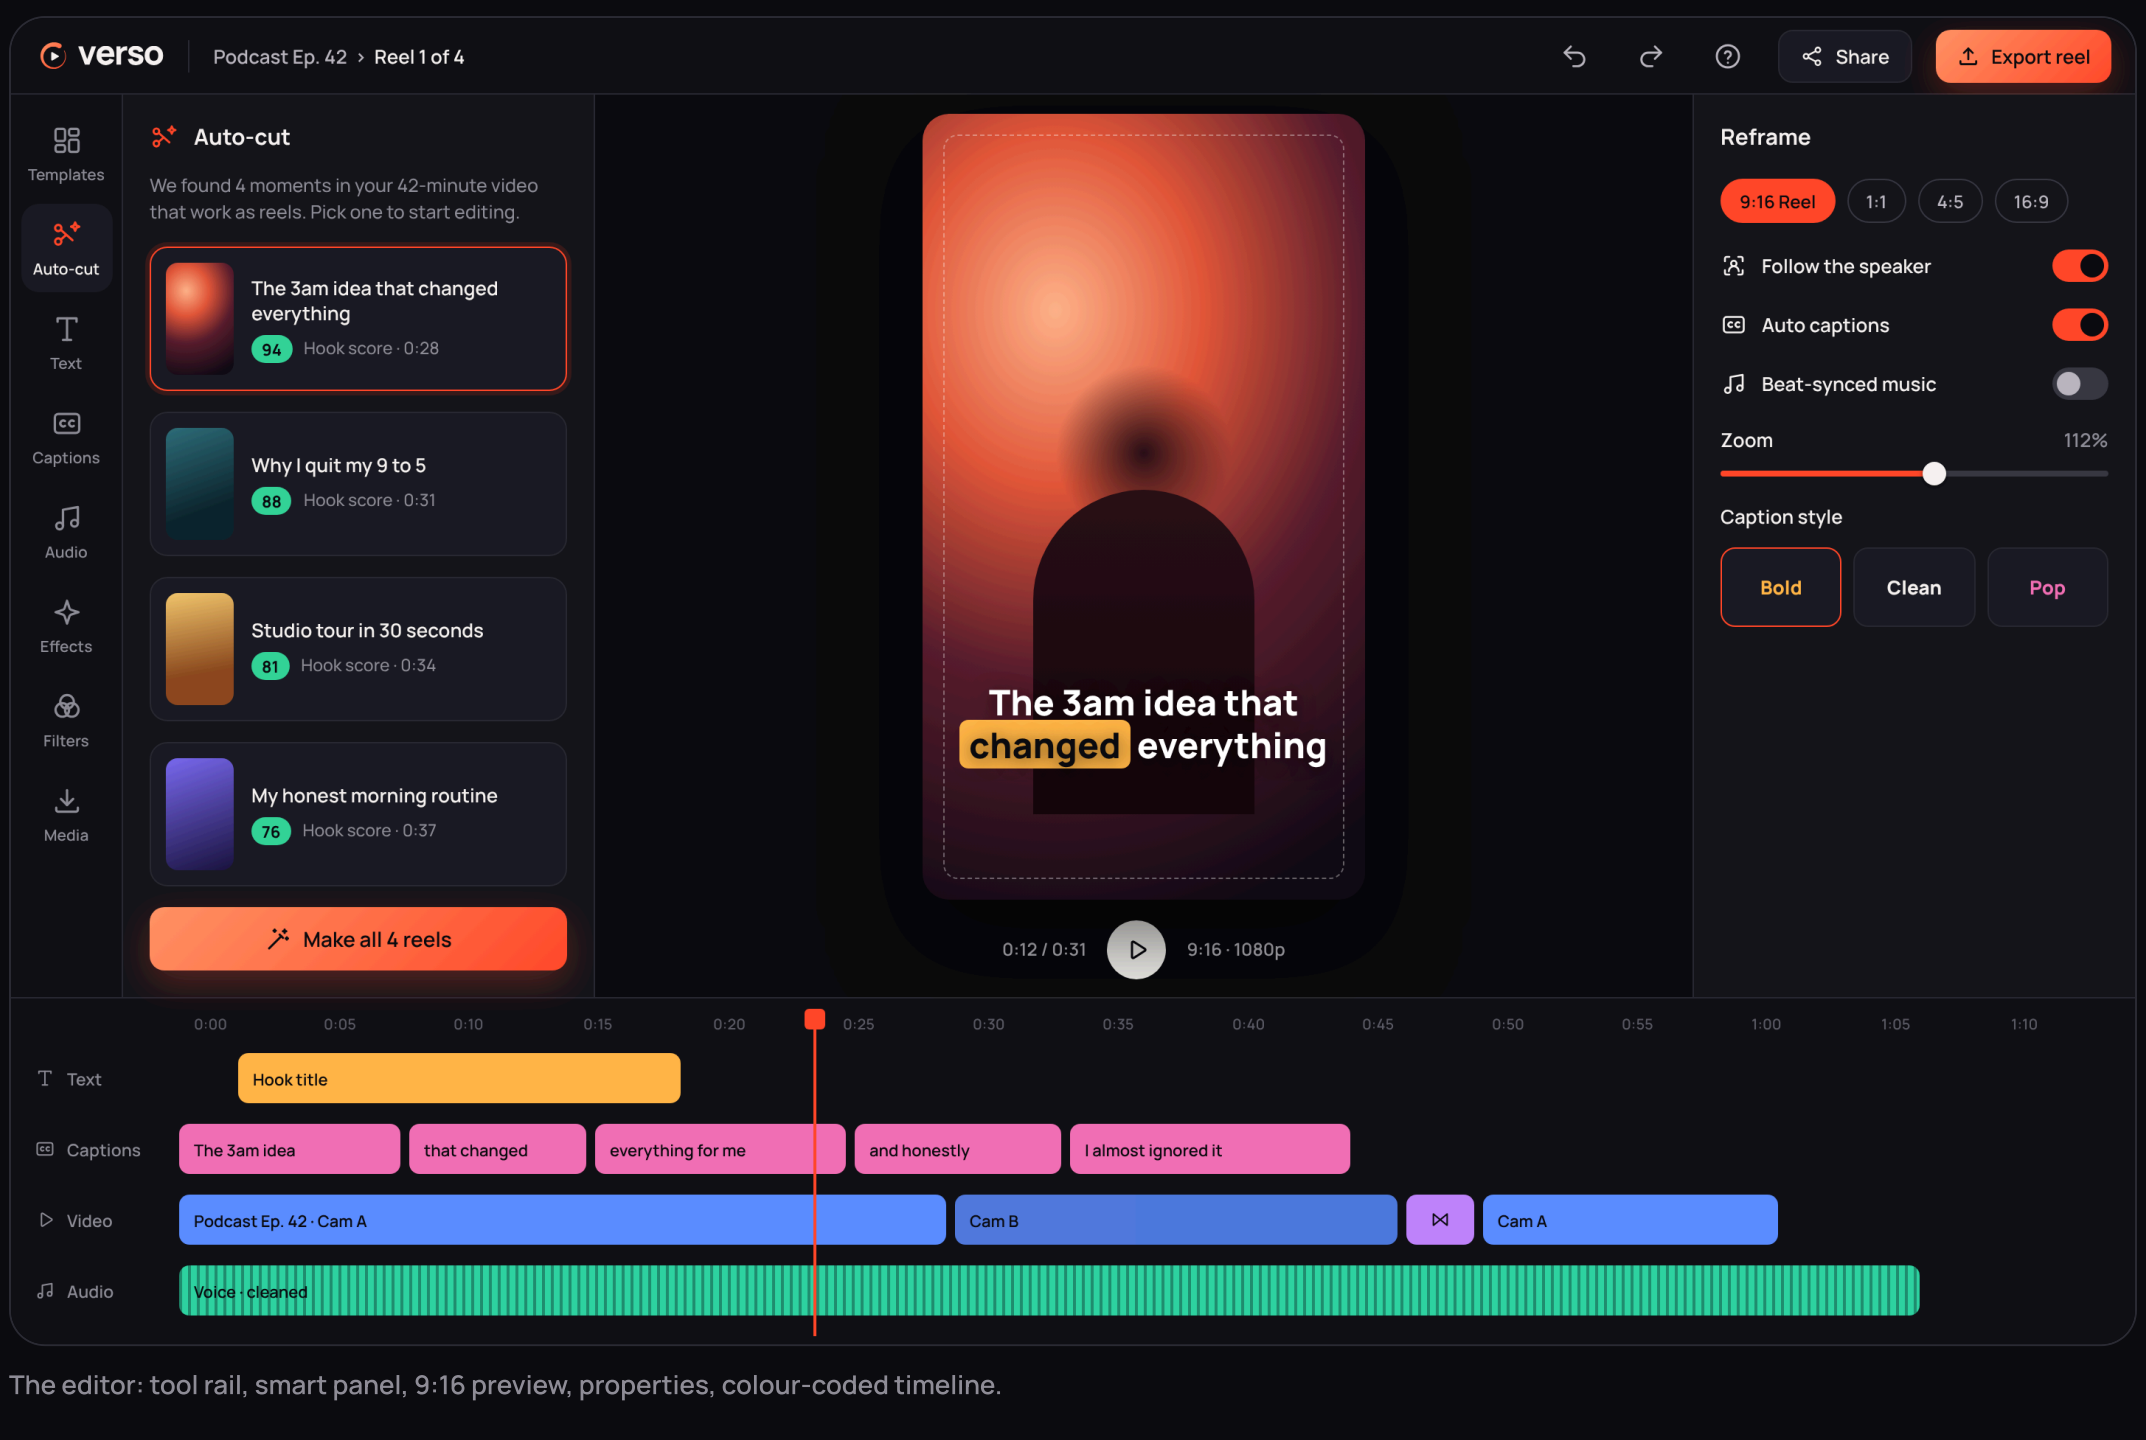

Always label

Rail icons always show a text label. Icon-only buttons need a tooltip and an accessible name.

06 · UI/UX

Designed for people who don't edit

Most Verso users have never used a timeline. Every screen should answer "what do I do next?" before they ask.

The editor: tool rail, smart panel, 9:16 preview, properties, colour-coded timeline.

01

Results first

Start with what Verso already did ("We found 4 reels"), then let people adjust. Never open on an empty timeline.

02

One primary action

Each screen has one Ember button. Everything else is secondary or ghost.

03

Smart defaults

Captions on, follow-the-speaker on, 9:16 selected. Users should be able to export without touching a setting.

04

Plain language

Say "Follow the speaker", not "Auto subject tracking". No codecs, bitrates or keyframes on the surface.

05

Undo everything

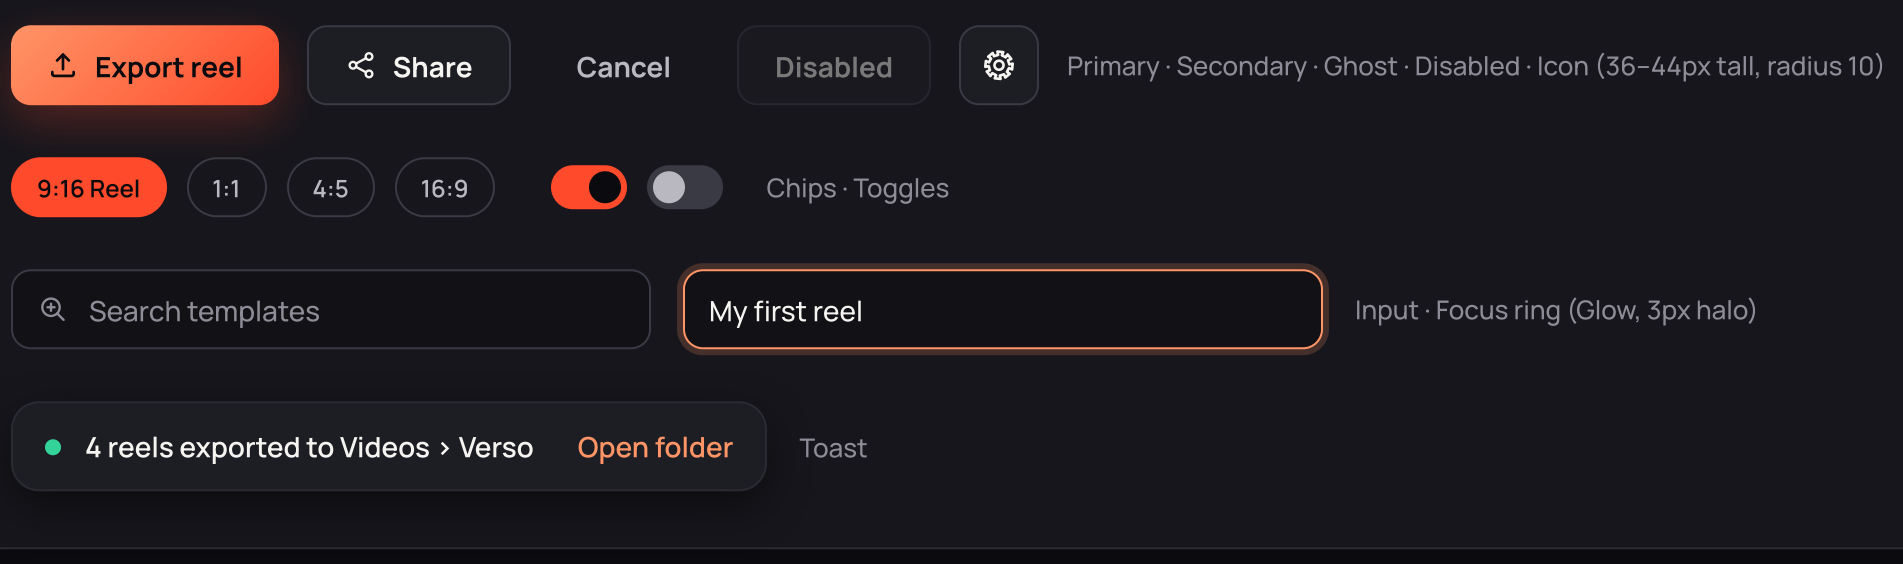

Every action is undoable and nothing destroys the original file. Confidence comes from safety.

06

Show progress

AI work shows live progress and what it is doing ("Finding hooks… 62%"), never a frozen spinner.

Components

Layout

4px spacing grid. Top bar 52px, tool rail 72–76px, panels 300–320px, timeline 220–260px. The preview always gets the remaining space.

Motion

120ms for hovers, 200ms for panels, 320ms for big moments. Standard easing cubic-bezier(.2,.8,.2,1). Respect "reduce motion".

Accessibility

AA contrast, full keyboard control (Space plays, S splits, ⌘/Ctrl+Z undoes), visible focus rings, targets at least 36px.

07 · VOICE

Talk like a friend who edits

Short, warm, encouraging. We celebrate the creator's work, not our technology.

Say

"We found 4 moments that would make great reels."

"Your reel is ready. Post it?"

"That didn't work. Try a shorter clip."

Don't say

"AI segmentation complete (4 segments)."

"Render job #3192 finished."

"Error 0x80070057: invalid input."

Taglines

Long videos in. Reels out.
Shoot wide. Post tall.
One podcast. Four reels. One click.

Writing rules

Sentence case. Verbs on buttons ("Export reel"). Numbers as digits. No jargon, no exclamation marks in errors.

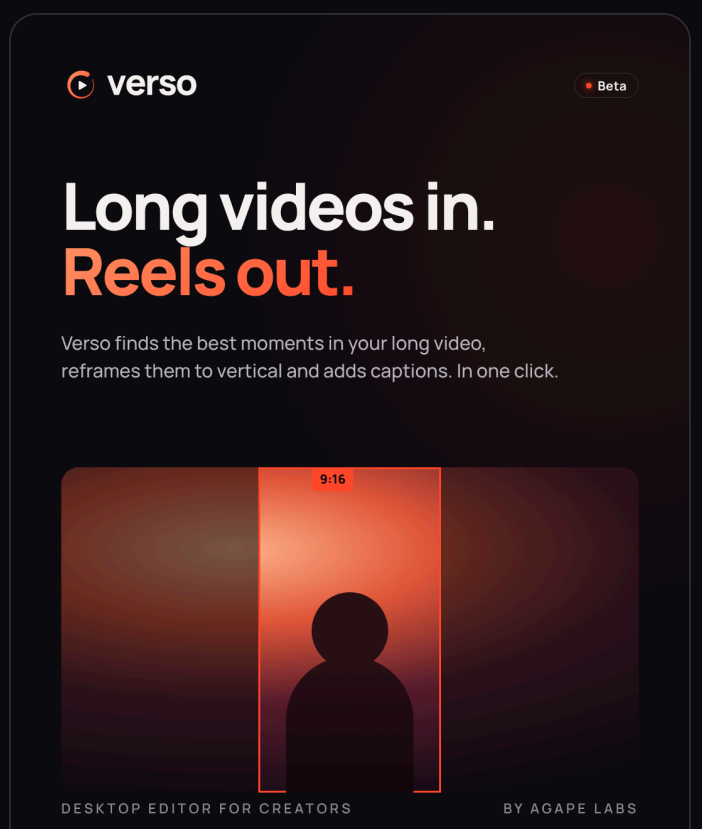

Naming

Always "Verso" (capital V in sentences, lowercase only in the logo). Never "VERSO" or "Verso App". Endorsement: "by Agape Labs".

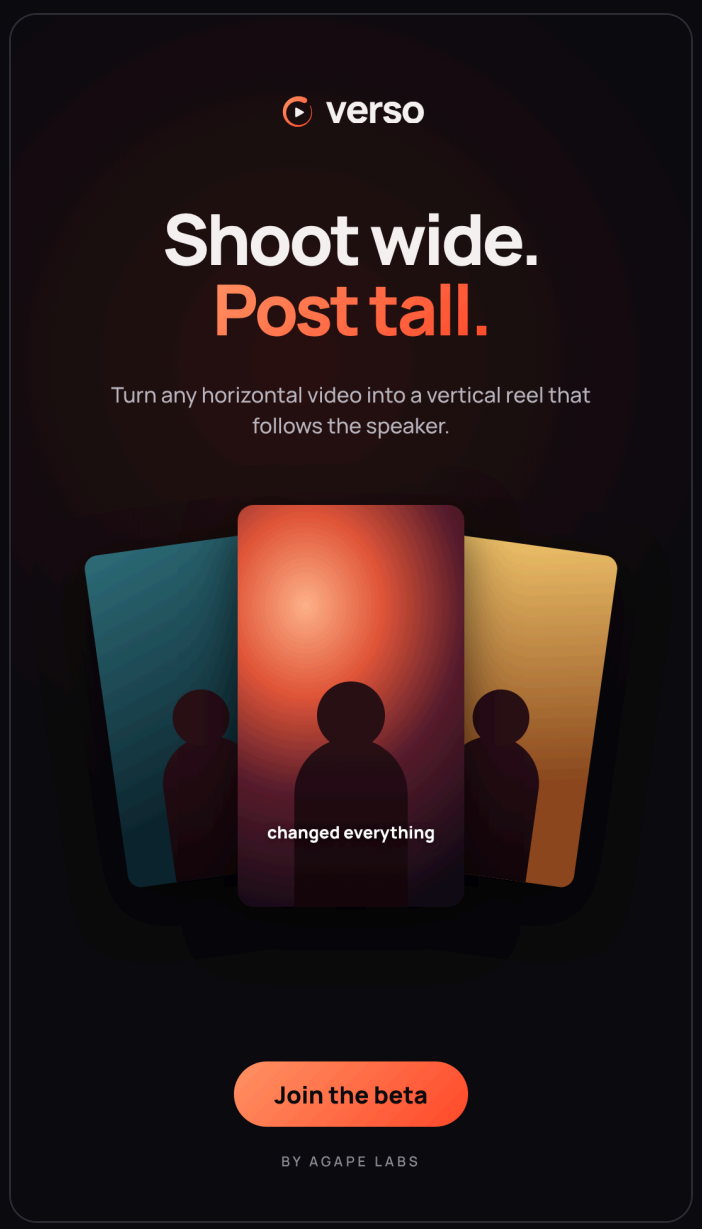

08 · IN THE WILD

Social & launch kit

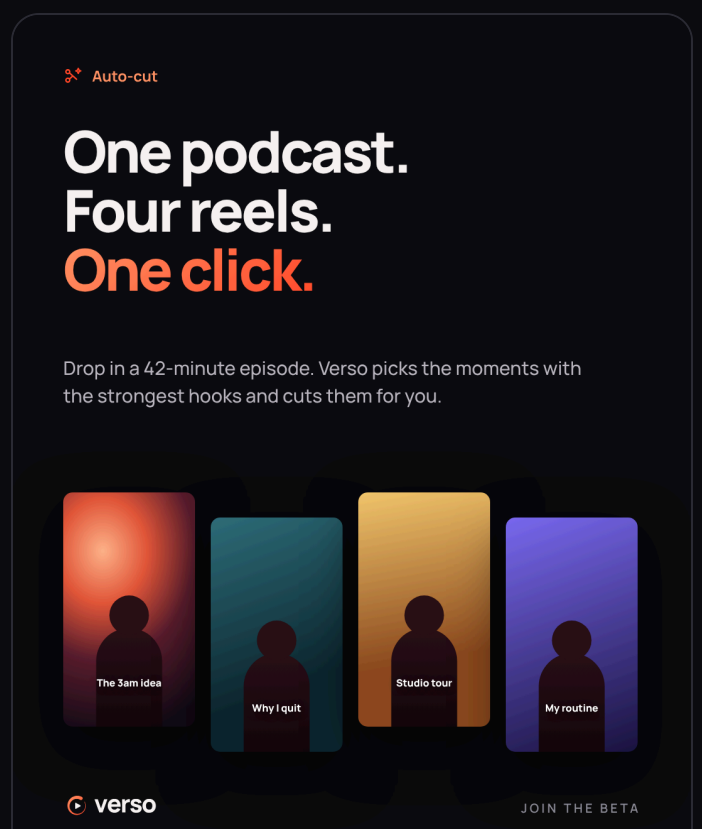

Dark canvas, one bold headline with the ember gradient on the payoff line, a product visual and the logo. Leave breathing room.

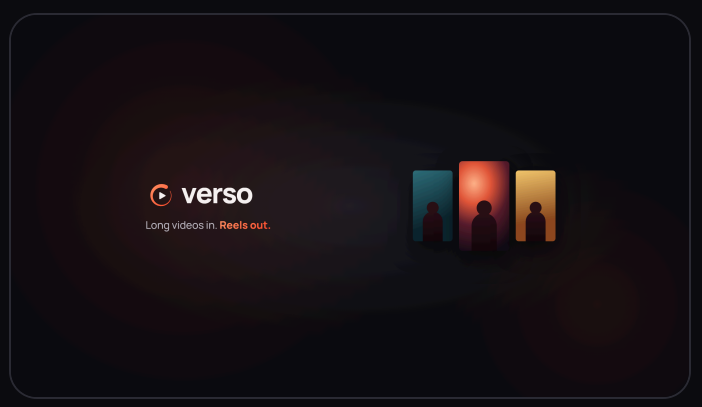

Instagram post

Instagram story

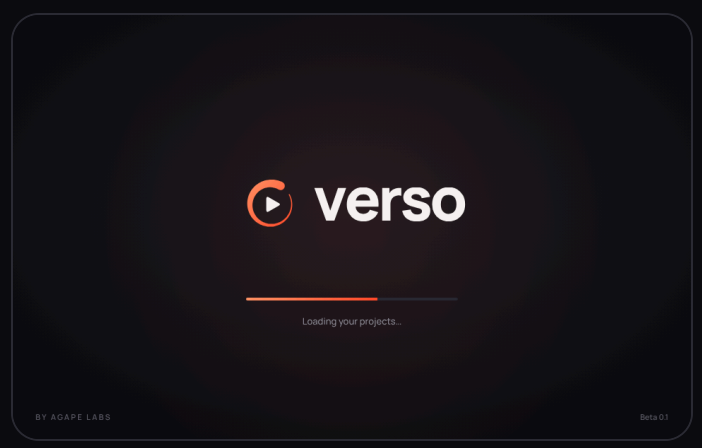

Feature post

App splash screen

09 · FILES

What's in the kit

01-Logo	Mark, horizontal and stacked lockups, wordmark. SVG (outlined, no font needed) and PNG at 2 sizes.
02-App-Icon	verso.ico (Windows), verso.icns (Mac), PNG 16 to 1024px, master SVGs including a heavier small-size icon.
03-Iconography	36 UI icons as SVG (24px, currentColor) plus a preview sheet.
04-Design-Tokens	verso-tokens.css, verso-tokens.json and a Tailwind preset for the React UI.
05-Guidelines	This document as HTML and PDF.
06-UI-Mockups	Editor screen mockup.
07-Social	Instagram post and story, feature post, YouTube banner, X and LinkedIn headers, avatar, share image, splash screen.
